1. The left and right eyes receive slightly different images of objects in the environment. TI is fact is known as :

A. Stroboscopic perception
B. Superposition
C. Binocular Parallax
•D. Binocular Disparity

2. Closure and proximity are

A. •Gestalt principles of perceptual organization.
B. Principles of perceptual recognition.
C. Learned through operant conditioning.
D. Principles of top-down processing.

3. Ivan Pavlov is important in psychology because he

A. •discovered the principles of classical conditioning.
B. discovered the principles of operant conditioning.
C. was the first to understand the implications of classical conditioning for drug tolerance.
D. won a Nobel prize for his work in animal digestion.

4. A ..... is a consequence which increases the likelihood that the preceding behavior will occur again.

•A. Reinforcement
B. Punishment
C. Discriminative Stimulus
D. Conditioned Stimulus

5. Children are most likely to grow up more competent and responsible when they are raised by parents who behave in a manner considered

A. authoritarian
•B. authoritative
C. permissive
D. inconsistent

6. Stella remembered the order of the planets from the Sun by recalling the sentence, "My very educated mother just served us noodles." For Stella, this sentence is a

A. chunking strategy
B. mnemonic device
C. peg system
D. acoustic encoding sequence

7. Jeanette locked the front door, then checked it by turning the knob. She checked it a second time. After walking halfway down the path to the street, Jeanette went back to the door and checked to make sure that it was locked. Her behavior appears to be

A. psychotic
B. schizophrenic
C. obsessive
D. compulsive

8. According to Selye's General Adaptation Syndrome (GAS) theory, of the following stages, we are most susceptible to disease during

A. resolution
B. resistance
C. alarm
D. exhaustion

9. An enduring emotional state is called :

A. A mood
B. An Emotion
C. A Temperament
D. An Emotional Judgement

10. The fight-or-flight response is generated by the ..... system.

A. central nervous
B. parasympathetic division of the autonomic nervous
C. sympathetic division of the autonomic nervous
D. Limbic System

11. Which of the following represents the proper order of activation of the systems involved in emotional arousal?

A. hypothalamus → brain stem → sympathetic system

B. autonomic nervous system → brain stem → hypothalamus

C. autonomic nervous system → hypothalamus → limbic system

D. limbic system → sympathetic nervous system → brain stem

12. Students will be able to read a statement printed in the Comic Sans font faster than the same statement written in the Lucida Calligraphy font. This statement is a(n)

A. hypothesis

B. theory

C. replication

D. operational definition

13. When subjects in the experimental group put a puzzle piece in the wrong place, the experimenter unconsciously winced. The experimenter did not wince when subjects in the control group put a piece in the wrong place. One method to eliminate the wincing of the experimenter is by instituting

A. the experimenter expectancy effect

B. the single-blind procedure

C. the double-blind procedure

D. the placebo effect

14. A neuron without terminal buttons would be unable to :

A. receive information from neighboring neurons

B. generate an action potential

C. direct the synthesis of neurotransmitters

D. secrete neurotransmitters to postsynaptic neurons

15. Which of the following glands interact(s) most directly with all of the others to help regulate body processes?

A. pituitary
B. adrenals
C. parathyroids
D. thyroid

16. The part of the brain most closely associated with maintaining balance and the coordination of complex sequences of movements is the

A. hypothalamus
B. thalamus
C. pons
D. cerebellum

17. Sensation can be defined as the :

A. process of converting physical energy into neural energy.
B. detection of the external stimuli around us.
C. process of organizing external stimuli into meaningful concepts.
D. mental processes necessary to locate and identify an external stimulus.

18. The process by which rods and cones convert electromagnetic energy into the activity of neurons is an example of

A. Transduction
B. Feature detection
C. Sensory adjustment
D. Accomodation

19. After sound waves pass through the auditory canal, they reach the

A. Eardrum
B. Middle Ear
C. Tunnel of Corti
D. Oval window

20. Of the following, which is not a basic taste?

A. sweet
B. salty
C. peppery
D. bitter

21. The two neurotransmitters that are most likely involved in mood disorders are

A. Dopamine and norepinephrine
B. GABA and serotonin.
• C. norepinephrine and serotonin.
D. Dopamine and GABA.

22. One of the most unique aspects of the MMPI is that it was first major personality inventory to incorporate

A. A criterion Control
B. Neuroticism Score
C. Validity scales
• D. Keyed Responses

23. ..... is one major goal of the id.

• A. Avoiding Pain
B. Day dreaming
C. Punishing the ego
D. Testing Reality

24. If you attempt to reduce your anxiety for having thoughts that are unacceptable, you may disguise this anxiety in a disguised form. This disguised behavior may take the form of .....

• A. Defense mechanism
B. Super ego impulses
C. Libidinal Drives
D. Sublimated desires

25. Most current personality psychologists would identify their thinking as using a ..... approach.

• A. Cognitive
B. Humanistic
C. Psychodynamic
D. Behaviourirst

26. Latent learning is best described by which of the following?

A. innate responses of an organism preventing new learning and associations
B. unconscious meaning that is attributed to new response patterns
C. delayed responses that occur when new stimuli are paired with familiar ones
• D. learning that occurs in the absence of rewards
